	ASSIGNMENT #	ASSIGNMENT TYPE	DURATION	
	4B	Document/Report	1 Day	

- All students must sit in the lecture hall according to their groups. (DKU-2 FK)
- Each group is required to prepare a minimum of **ONE (1)** question related to **Chapter 10: Managing People and Organizing Team**. Please discuss your question within your group and indicate it in the box below:

Good afternoon Mr Guna, my name is Bintang, currently I'm the third year degree in Software Engineering and I'm mobility student from Indonesia in Software Project Management class.

Mr Guna, just now you have mention that our eras so fast in digital transformation and so different from past, start from e-platform, AI technology in health care, cybersecurity and some of them, So my question is how do you think about digital transformation in the future era and what your opinion about this transformation it will be opportunities or be a challenge to human life and how we take advantage in this era with transformation digital. Thank you.

[5 Marks]

Example questions:

- How can teams effectively balance individual goals with team objectives to optimize overall performance?
 - What specific leadership styles are most effective in fostering high-performing teams, and how can leaders adapt their approach to different team contexts?
 - What are the key challenges and best practices for managing teams that work remotely, and how can organizations ensure effective communication and collaboration in these settings?
- Each group must select **ONE (1)** member to ask a question using the provided microphone (if you have to use microphone)
 - When the selected member is asking the question, **ONE (1)** member from each group must take a photo of the activity. Please paste the photo in the box below:

[5 Marks]

6. The remaining group member(s) must write down the speaker's answer in the box below:

That's a good question, right? So, AI. So, is it something, is it a friend or is it a foe? Is it something benefit or is it going to cause us a lot of harm? Now, um, you guys don't learn AI so deep, so there will be uh this is what you call uh ethical artificial intelligence, right? So, how do you use AI for a good purpose? So, there's many way how you can look at it, but to answer your question uh just now, AI you can't stop it, right? Because technically, I call it a revolution. So, the AI revolution has started, you can't backtrack now and say stop using AI. Your smartphone nowadays is already using AI. Cars are being implemented with AI. Even Proton, Perodua and all that, right? So, you can't backtrack now. The revolution has technically started. So, what humans or generally companies and people are going to do is we are now going to start building safety nets. How do we protect AI? How do we protect ourselves? How do we protect businesses from misuse of AI. So, if you ask me, AI is required to to to push mankind from one step further. You know, like most of how many of you have watched uh movies like Star Wars? Right? So, you know, you have droids, right? So, droids itself technically you use droids to make to use or to do things that you can't repair. For example, you use machine to repair things in flight. It's fictional, but they have seen it through 20 years ahead, 30, 40 years ahead of how the transformation. Right? And today we can talk based on what we have today. But 20 years

		DURATION 1 Day	

forward, you guys would be looking at technology that you could never imagine, which is powered using AI. But like I said, right? So when you have something good, there's always bad. So how do you protect yourself.
